

# Hacking Bluetooth enabled mobile phones and beyond – **Full Disclosure**

## Blackhat Security Briefings

March 31-April 1, Amsterdam, the Netherlands

April 5-6, Singapore

---

Adam Laurie, Marcel Holtmann, Martin Herfurt

# Who we are

- Adam Laurie
  - CSO of The Bunker Secure Hosting Ltd.
  - Co-Maintainer of Apache-SSL
  - DEFCON Staff/Organiser
- Marcel Holtmann
  - Maintainer and core developer of the Linux Bluetooth Stack BlueZ
- Martin Herfurt
  - Security Researcher
  - Founder of [trifinite.org](http://trifinite.org)

# Outline

- Bluetooth Technology Overview
- History
- The BlueSnarf Attack
- The BlueBug Attack
- Bluetooone
- Long-Distance Attacking
- Blooover
- Blueprinting

# Outline

- DOS Attacks
  - L2Ping
- Sniffing Bluetooth with hcidump
- Demonstrations
  - Bluebug?
  - gsnarfii
  - gnokii
  - Blooover
- Conclusions – Lessons taught
- Feedback / Discussion

# Bluetooth Technology Overview

- Wire replacement technology
- Low power
- Short range 10m - 100m
- 2.4 GHz
- 1 Mb/s data rate

# Bluetooth Technology Overview

- Bluetooth SIG
  - Trade Association
  - Founded 1998
  - Owns & Licenses IP
  - Individual membership free
  - Promoter members: Agere, Ericsson, IBM, Intel, Microsoft, Motorola, Nokia and Toshiba
  - Consumer <http://www.bluetooth.com>
  - Technical <http://www.bluetooth.org>

# History

- Bluejacking
  - Early adopters abuse 'Name' field to send message
  - Now more commonly send 'Business Card' with message via OBEX
  - 'Toothing' - Casual sexual liasons

# History

- Bluesnarfing
  - First publicised by Marcel Holtmann, October 2003
    - Wireless Technologies Congress, Sindelfingen, Germany
  - Adam Laurie, A L Digital, November 2003
    - Bugtraq, Full Disclosure
    - Houses of Parliament
    - London Underground
  - 'Snarf' - networking slang for 'unauthorised copy'

# History

- Bluesnarfing
  - Data Theft
  - Calendar
    - Appointments
    - Images
  - Phone Book
    - Names, Addresses, Numbers
    - PINs and other codes
    - Images

# History

- Bluebugging
  - First publicised by Martin Herfurt, March 2004
    - CeBIT Hanover
  - Create unauthorised connection to serial profile
  - Full access to AT command set
  - Read/Write access to SMS store
  - Read/Write access to Phone Book

# Bluetooth technology

- Data and voice transmission
  - ACL data connections
  - SCO and eSCO voice channels
- Symmetric and asymmetric connections
- Frequency hopping
  - ISM band at 2.4 GHz
  - 79 channels
  - 1600 hops per second
  - Multi-Slot packets

# Bluetooth piconet

- Bluetooth devices create a piconet
  - One master per piconet
  - Up to seven active slaves
  - Over 200 passive members are possible
  - Master sets the hopping sequence
  - Transfer rates of 721 Kbit/sec
- Bluetooth 1.2 and EDR (aka 2.0)
  - Adaptive Frequency Hopping
  - Transfer rates up to 2.1 Mbit/sec

# Bluetooth scatternet

- Connected piconets create a scatternet
  - Master in one and slave in another piconet
  - Slave in two different piconets
  - Only master in one piconet
  - Scatternet support is optional

# Bluetooth architecture

- Hardware layer
  - Radio, Baseband and Link Manager
  - Access through Host Controller Interface
    - Hardware abstraction
    - Standards for USB and UART
- Host protocol stack
  - L2CAP, RFCOMM, BNEP, AVDTP etc.
- Profile implementations
  - Serial Port, Dialup, PAN, HID etc.

# Bluetooth stack

Application specific security mechanisms

Bluetooth host security mechanisms

Security mechanisms on the Bluetooth chip

# Bluetooth security

- Link manager security
  - All security routines are inside the Bluetooth chip
  - Nothing is transmitted in “plain text”
- Host stack security
  - Interface for link manager security routines
  - Part of the HCI specification
  - Easy interface
  - No further encryption of pin codes or keys

# Security mode

- Security mode 1
  - No active security enforcement
- Security mode 2
  - Service level security
  - On device level no difference to mode 1
- Security mode 3
  - Device level security
  - Enforce security for every low-level connection

# Linux and Bluetooth

## # hciconfig -a

```
hci0:  Type: USB
      BD Address: 00:02:5B:A1:88:52 ACL MTU: 384:8  SCO MTU: 64:8
      UP RUNNING PSCAN ISCAN
      RX bytes:9765 acl:321 sco:0 events:425 errors:0
      TX bytes:8518 acl:222 sco:0 commands:75 errors:0
      Features: 0xff 0xff 0x8b 0xfe 0x9b 0xf9 0x00 0x80
      Packet type: DM1 DM3 DM5 DH1 DH3 DH5 HV1 HV2 HV3
      Link policy: RSWITCH HOLD SNIFF PARK
      Link mode: SLAVE ACCEPT
      Name: 'Casira BC3-MM'
      Class: 0x1e0100
      Service Classes: Networking, Rendering, Capturing, Object Transfer
      Device Class: Computer, Uncategorized
      HCI Ver: 1.2 (0x2) HCI Rev: 0x529 LMP Ver: 1.2 (0x2) LMP Subver: 0x529
      Manufacturer: Cambridge Silicon Radio (10)
```

## # hcitool scan

```
Scanning ...
00:04:0E:21:06:FD      AVM BlueFRITZ! AP-DSL
00:01:EC:3A:45:86      HBH-10
00:04:76:63:72:4D      Aficio AP600N
00:A0:57:AD:22:0F      ELSA Vianect Blue ISDN
00:E0:03:04:6D:36      Nokia 6210
00:80:37:06:78:92      Ericsson T39m
00:06:C6:C4:08:27      Anycom LAN Access Point
```

# Security commands

- HCI\_Create\_New\_Unit\_Key
- HCI\_{Read|Write}\_Pin\_Type
- HCI\_{Read|Write|Delete}\_Stored\_Link\_Key
- HCI\_{Read|Write}\_Authentication\_Enable
- HCI\_{Read|Write}\_Encryption\_Mode
  
- HCI\_Authentication\_Requested
- HCI\_Set\_Connection\_Encryption
- HCI\_Change\_Local\_Link\_Key
- HCI\_Master\_Link\_Key

# Pairing functions

- Events
  - HCI\_Link\_Key\_Notification
  - HCI\_Link\_Key\_Request
  - HCI\_Pin\_Code\_Request
- Commands
  - HCI\_Link\_Key\_Request\_Reply
  - HCI\_Link\_Key\_Request\_Negative\_Reply
  - HCI\_Pin\_Code\_Request\_Reply
  - HCI\_Pin\_Code\_Request\_Negative\_Reply

# How pairing works

- First connection
  - (1) HCI\_Pin\_Code\_Request
  - (2) HCI\_Pin\_Code\_Request\_Reply
  - (3) HCI\_Link\_Key\_Notification
- Further connections
  - (1) HCI\_Link\_Key\_Request
  - (2) HCI\_Link\_Key\_Request\_Reply
  - (3) HCI\_Link\_Key\_Notification (optional)

- Trivial OBEX PUSH channel attack
  - PULL known objects instead of PUSH
  - No authentication
- Infrared Data Association
  - IrMC (Specifications for Ir Mobile Communications)
    - e.g. telecom/pb.vcf
- Sony Ericsson T68, T68i, R520m, T610, Z1010
- Nokia 6310, 6310i, 8910, 8910i

# HeloMoto

- Requires entry in 'My Devices'
- OBEX PUSH to create entry
- Connect RFCOMM to Handsfree or Headset
  - No Key required
  - Full AT command set access
- Motorola V80, V5xx, V6xx and E398

# BlueBug History (1)

- First presentation in February 2004
  - FH Salzburg 'Forum IKT 2004'
  - Spicing up a presentation about Wardriving
- Got inspired from Adam's BlueSnarf which has been written about on slashdot
- Tried to figure out how Adam did it (no tools available)
- Found BlueBug
  - Based on AT Commands -> not OBEX

# BlueBug History (2)

- Fieldtrial at CeBIT 2004
  - Booth close to the restrooms -> many people there
  - Even Policemen ;)
- Got on slashdot at the end of March 2004
- Teamed up with Adam in April 2004
- Various media citations
- Presentation at Blackhat and DEFCON in August 2004
- Full Disclosure at 21C3 in December 2004

# BlueBug Facts (1)

- As mentioned earlier...
  - BlueBug is based on AT Commands (ASCII Terminal)
  - Very common for the configuration and control of telecommunications devices
  - High level of control...
    - Call control (turning phone into a bug)
    - Sending/Reading/Deleting SMS
    - Reading/Writing Phonebook Entries
    - Setting Forwards
    - -> causing costs on the vulnerable phones!

# BlueBug Facts (2)

- How come!?
  - Various Manufacturers did a bad job implementing the Bluetooth stack
  - Unpublished services on RFCOMM channels
    - Not announced via SDP
- Connecting to unpublished HS service without pairing!
  - Nokia has quite a lot of models (6310, 6310i, 8910, 8910i,...)
  - Sony Ericsson T86i, T610
  - Motorola has similar Probs (see HELOMOTO)

# Bluetooone

- Enhancing the range of a Bluetooth dongle by connecting a directional antenna -> as done in the Long Distance Attack
- Original idea from Mike Outmesguine (Author of Book: "Wi-Fi Toys")
- Step by Step instruction on [trifinite.org](http://trifinite.org)

# Long-Distance Attacking

- Beginning of August 2004 (right after DEFCON 12)
- Experiment in Santa Monica California
- Modified Class-1 Dongle Snarfing/Bugging Class-2 device (Nokia 6310i) from a distance of 1,78 km (1.01 miles)

# Bloover - What is it?

- Bloover - *Bluetooth* Wireless Technology Hoover
- Proof-of-Concept Application
- Educational Purposes only
- Phone Auditing Tool
- Running on Java
  - J2ME MIDP 2.0
  - Implemented JSR-82 (Bluetooth API)
  - Nokia 6600, Nokia 7610, Nokia 6670, ... Series 60
  - Siemens S65
  - SonyEricsson P900 ...

# Bloover- What does it do? **Bloover**<sup>™</sup>

- Bloover is performing the BlueBug attack
  - Reading phonebooks
  - Writing phonebook entries
  - Reading/decoding SMS stored on the device (buggy..)
  - Setting Call forward (predef. Number) +49 1337 7001
  - Initiating phone call (predef. Number) 0800 2848283
    - Not working well on Nokia phones :( but on some T610
- Please use this application responsible!
  - Not with phones of strangers...

# Blueprinting – What is it? **Blueprinting**<sup>™</sup>

- Blueprinting is fingerprinting *Bluetooth* Wireless Technology interfaces of devices
- This work has been started by Collin R. Mulliner and Martin Herfurt
- Relevant to all kinds of applications
  - Security auditing
  - Device Statistics
  - Automated Application Distribution
- Released paper and tool at 21C3 in December 2004 in Berlin

# Blueprinting - How

- Hashing Information from Profile Entries
  - RecordHandle
  - RFCOMM channel number
  - Adding it all up  $(\text{RecHandle}_1 * \text{Channel}_1) + (\text{RecHandle}_2 * \text{Channel}_2) + \dots + (\text{RecHandle}_n * \text{Channel}_n)$
- Bluetooth Device Address
  - First three bytes refer to manufacturer
- Example of Blueprint

**00:60:57@2621543**

- Using L2CAP echo feature
  - Signal channel request/response
  - L2CAP signal MTU is unknown
  - No open L2CAP channel needed
- Buffer overflow
- Denial of service attack

```
< HCI Command: Create Connection (0x01|0x0005) plen 13

> HCI Event: Disconn Complete (0x05) plen 4
 0000: 00 29 00 16      .)..
```

# Sniffing with hcidump

- Recording of HCI packets
  - Commands, events, ACL and SCO data packets
- Only for local connections
- Decoding of higher layer protocols
  - HCI and L2CAP
  - SDP, RFCOMM, BNEP, CMTP, HIDP, HCRP and AVDTP
  - OBEX and CAPI
- No sniffing of baseband or radio traffic

# Conclusions

- Bluetooth is a secure standard (per se)
  - Problems at application level
- Cooperation with Bluetooth SIG
  - Pre-release testing at UPF (UnplugFests)
  - Better communication channels for external testers
    - Security Expert Group mailing list
    - bluetooth.org more open areas
  - Mandatory security at application level

# trifinite.org

- <http://trifinite.org/>
- Loose association of BT security experts
- Features
  - **trifinite.blog**
  - **trifinite.stuff**
  - **trifinite.album**
  - **trifinite.group**

# trifinite.group

- Adam Laurie (the Bunker Secure Hosting)
- Marcel Holtmann (BlueZ)
- Collin Mulliner (mulliner.org)
- Tim Hurman (Pentest)
- Mark Rowe (Pentest)
- Martin Herfurt (trifinite.org)
- Spot (Sony)
